

Anyway to remove the App that is playing? I only use the Music App on MacOS and really don't need to have Song - Artist (Music)

I'm not a coder and cannot tell for the life of me to how to remove it!

Would really like to have the following format

Song : Album : Artist

Many thanks!

Removing the player would just mean deleting (`#{@app}`) from line 114. Adding Album would require some more extensive scripting.
