

It was line 88 for me, not line 90. Specifically, the line to be replaced was this one:

```
nrse = newres.match(/'_nr_se': '([\^']+)'/[1]
```

Also, to get the script working in ruby 1.9, remove -rjcode from the first line and add

```
require 'jcode' if RUBY_VERSION < '1.9'
```

on, say, line 8. (For an explanation, see [this](#).)
