

After you made your modifications, what is on line 88?

Eric — Sep 29, 2011 11:51 pm

```
rnrs = CGI.escape(newres.match(/'_rnr_se': '([\^']+)'')[1])
```

Eric — Sep 29, 2011 11:53 pm

I also had added `require 'jcode'` if `RUBY_VERSION < '1.9'` for the other fix.

Brett — Sep 29, 2011 11:58 pm

That means it's not finding `_rnr_se` in the returned text, which probably means that the authentication process is failing at some point. That would take more debugging than I can offer on this one, but you might start by dissecting the various calls and spitting the results out to console to see if you're getting expected responses.

Eric — Sep 30, 2011 12:15 am

Hehehe. I copied the fixed line from here. Didn't work, as shown. I ran `rdebug` with it. Says something about invalid multibyte character. Turns out, the single quotes weren't regular old single quotes, they were smart quotes. `"` instead of `'`. Works now! Thanks.
