For whatever reason, I needed to modify the awk command to 'print \$6' as the ls -lsh command puts the file size as the 6th column on the output, not the 5th. Not sure if that's just a typo at your end, or my end, or what....

In any case, thanks for this tip. Not sure yet if [Mail.app](#) will be any faster, but I did cut the size of the Envelope database by approx. 30%.
