

```
/usr/lib/ruby/1.8/net/http.rb:2097:in error!': 500 "Internal Server  
Error" (Net::HTTPFatalError)  
from voicesms.rb:61:in postit'  
from voicesms.rb:90  
from voicesms.rb:88:in `each'  
from voicesms.rb:88
```

I have two google voice accounts ... one is 970dogwalk@gmail.com
and the other one is 1970dogwalk@gmail.com. When I use the
970dogwalk number everything is fine, but when I use the
1970dogwalk@gmail.com I get the error above ... maybe it has
something to do with the username, since everything else is identical.
Hope we can figure this one out ... I really need to use the
1970dogwalk account to send sms messages.

Maybe it has something to do with the length of the username ... i will
setup another test with an 11 char length account ...
