I'm not sure if this is related, but Alfred is having a similar problem. For some reason, Spotlight is now indexing iCal ".ics" files as text files (as of 10.7.2). I'm starting to think that something has changed in the overall way Spotlight is looking at data.

I should learn to finish the first cup of coffee before typing in the morning...

Brett — Oct 19, 2011 04:30 am

I think it could be related. Spotlight is actually not returning a filetype at all for ics files right now, thus defaulting to text. A dozen different apps could have re-registered my Markdown files, but it seemed to coincide with the 10.7.2 update. Really not sure yet.
