Hmmm, I just ran it with your username and got your favorites just fine. Day One did, however, crash the first time opening after doing that. Next time it was fine and a handsome lad was doing some Angry Birds coloring: <http://ckyp.us/RbgV>

Did you run slogger again to see if it was a fluke?

By the way, the easiest way to undo a run is to use the find command from your Journal folder. Location of the Journal folder in iCloud is usually ~/Library/Mobile Documents/5U8NS4GX82-com~dayoneapp~dayone/Documents/Journal_dayone.

```
find . -newerct '10 minutes ago' -type f
```

Will show you what files were just created in the last 10 minutes.

```
find . -newerct '10 minutes ago' -type f -exec rm {} \;
```

will delete just those files. It's faster than manually deleting them in Day One by far.
