I got this error when running the script today. It was working then upgraded DayOne and it broke. [error and config setting via pastebin](#)

Also My iOS DayOne was syncing to a dropbox folder called Day One now the app on the mac wants me to move it to Dropbox/Apps/Day One but iPhone doesn't allow me to select that folder. It seems now the phone/ipad wants Dropbox root. I'm I crazy?

OK I take all of that back because it started working after a restart of my machine. Now however I'm getting multiple copies of each image. It made 5 copies of each image before aborted. Any Ideas?

PS: All the images have unique names and for what it's worth the oddities of DayOne folder naming thing is still a problem but I've found a slight workaround by launching the program via clicking the Dayone.journal file to launch it.

## **Brett — Aug 10, 2012 06:21 pm**

Multiple copies from an image folder watcher, or from stuff it downloads from Twitter?

## **Doc Rock — Aug 10, 2012 11:25 pm**

BT, it's hard to tell if it's Hazel or the Twitter side for sure. I assumeed it was happening because of the script because console logs show QL errors and if I look at the folder listing as the action is happening, I can see the icon flickering between generic img icon and a thumbnail icon... Next thing I notice is the Dayone.journal package contents has a photos folder with 30 plus copies of photos.

Do you have a better idea for tracing or debug view of the scripts or Hazel?

<http://cl.ly/image/1a3e2d0E...> Just in case you need more info!

## **Doc Rock — Aug 13, 2012 09:37 am**

Aloha Brett et. al,

So I was wondering if there was a way to see if the image dupes wee coming from the face that IG and Twitter both would contain the sam image data if the original IG was marked for sharing via Twitter. I tried posting on IG with no sharing and still got dupes. I also made a watched folder on my desktop called PicsILove and made Hazel run the (slogger\_image.rb) shel script. When executes it then moves the image out of that folder to hopefully avoid the dupes and it still makes two copies. It a big step away from 5 or more but still confused why I'm getting dupes.

On a separate note would slogger type thing work as a shortcut to get my NVAIt notes into Day One using the same part of the script that adds the twitter feed?

Thanks,

Doc

## **Bad Uncle Leo — Aug 11, 2012 05:37 am**

For some reason (DayOne first run, I forget which) my DayOne folder was in /Dropbox/Apps/

I had Slogger config problems until I symlinked *that* folder to:

```
~/Dropbox/Journal.dayone
```

So the whole command I did was:

```
cd to Dropbox
```

```
ln -s /Users/lmarihar/Dropbox/Apps/Day One/Journal.dayone Journal.dayone
```

Once I did that, things worked.

-Leo

**Matthias — Aug 26, 2012 12:30 pm**

Thank you. I had the same Problem. I think it's caused by the space in the Day One path.
