really want to try this, have retina mbp with mountain lion. I am not a hardcore dev so I am not running Ruby. It looks like it is required and I have no problem installing it. Found a checklist here <https://gist.github.com/330...> but wanted find out if I need anything else but the base install?

thx.

jMoney: YOu already have Ruby it come with OS X. Go to terminal and type the command:
ruby -v

You'll find Ruby is already installed

```
MacBook-2:~ pimpstrong$ ruby -v
ruby 1.8.7 (2011-12-28 patchlevel 357) [universal-darwin11.0]
MacBook-2:~ pimpstrong$ whereis ruby
/usr/bin/ruby
```

Aloha
