BT, it's hard to tell if it's Hazel or the Twitter side for sure. I assumed it was happening because of the script because console logs show QL errors and if I look at the folder listing as the action is happening, I can see the icon flickering between generic img icon and a thumbnail icon... Next thing I notice is the Dayone.journal package contents has a photos folder with 30 plus copies of photos.

Do you have a better idea for tracing or debug view of the scripts or Hazel?

Mahalo
