Hi Mario, Lingon ONLY works with launch daemon files. What you SHOULD do is follow the directions and do the install.rb thing, that puts the Slogger scheduling file in:

```
~/Library/LaunchAgents/com.bretterpstra.slogger
```

If you use Lingon 3 from the Mac app store you can ONLY see 'user services'... the older Lingon allowed you to see system level ones but that is forbidden by the MAS. You'll be able to see this file in Lingon 3.

To repeat: If you're a beginner with launch daemon/scheduling files, the best thing to do is have Matt's install script set up a Launch Agent for you.. then you can see what can be edited in Lingon.

-Leo
