To be more specific, it looks like your 'qualified file path' is incomplete. If you have Brett's 'install.rb' script do the work, you'll get the right path.

-Leo

Mario — Aug 13, 2012 12:17 pm

Thanks for the reply Leo. I didn't know how to run the install file to get the launch agent. What I ended up doing is creating an 'application' on Automator to run the terminal script then I scheduled this using Hazel by saying 'if' application hasn't been opened in over 24 hours then run the application. Long way round I know, but it works.

Another thing I noticed is that on the 'list view' on Day One, the markup isn't displaying for me. Its fine when I go into the entry but just seeing the 'code' in the list. Anyone else seeing this? I've contact Day One about it but just curious to see if is just me.

Jeff Jenkins — Aug 20, 2012 01:41 pm

Yes, seeing exactly the same thing, though I have one Day One entry that has a Bold first line but when I edit it there is no markup. This goes away on this one entry when I swith off the "Auto-Bold first line" option in the settings. The markdown is showing OK in the entry view when in Non-editing mode.
