Having a ball with Day One and would really like to get your Slogger code working, but I keep getting -
`initialize': Path not specified or doesn't exist: ~/Dropbox/Apps/Day\ One/Journal.dayone
(RuntimeError)

- I've tried enclosing the full path in quotes and still no luck. I've also tried using the full path- no luck. What could I be doing wrong?

Cheers,

Steve

Steve,

I had the same issue as you can see above. It way I fixed it was to give up and use icloud (against my better judgement). I though os symbolic linking it like Leo says above but I wasn't sure it was gona work. After reading Leo's comment I will tel it it would work but by that time I stuck with icloud and it is seamless.

Aloha,
Doc

Thanks, Doc. I'll take another look at Leo's suggestion- I really don't want to got the iCloud route.

Cheers,

Steve
