One more question (sorry). There is a line in the code to be uncommented

```
options['datestamp'] = Time.parse(%x{mdls -raw -name kMDItemContentCreationDate "#  
{File.expand_path(file)}"}).utc.iso8601
```

that claims to insert an image at the date it was created rather than the current date. Does this get the date from the image data (EXIF?) or does it just use the date the file was created on the machine?
