Hey Brett, thanks for writing this up, you always have amazing tools to share.

One thing I'm struggling with a bit is developing a tagging workflow, and a big part of the reason is that I use nvALT pretty heavily, but it doesn't have a modern tag integration. I asked you about this maybe a year or so ago and you mentioned you were thinking heavily about a post-Mavericks workflow vis-a-vis nvALT. Anyway, I don't want to jump to conclusions, but I noticed you still mentioned nvALT in part 1 of this article, and curious how you make it play with native OS X tagging?

### **ttscoff — Mar 10, 2015 07:45 pm**

I'm currently running a private build that does use Finder tags, but the logistics of making a painless switch for all users ended up being more trouble than it was worth, given we're working on a commercial replacement for it that needed the coding hours.

### **Gabe da Silveira — Mar 10, 2015 08:55 pm**

Are there any posts/podcasts about the commercial replacement?
