What changes did you need to make to get this to work? Just host the js on your site directly?

My [bookmarklet for selecting text based on Bullseye](<https://gist.github.com/queuebit/6118987>){"rel="nofollow" target="_blank"} broke too and was wondering what changes I needed to make.

Thanks for creating this stuff.

Yep, I just found a host that would allow json headers (in this case, my host) and moved the main bookmarklets there.
