thanks for this -- very much appreciated! Though everything works well through the command line, I wanted to use Tower but can't seem to get around a permissions issue with the config file I setup... When I try to clone a repo through Tower, it fails because there is no access to ~/.ssh/config. Initially its permissions were 644, but i tried setting to 700 and 755 with no success. Do you by chance have a recommendation for addressing this so that I can manage my Synology-hosted repos through Tower? Many thanks again for this guide!

## **ttscoff — Aug 30, 2018 05:36 pm**

Mine is set to 600 and working fine with Tower...
