"Setting up a non-root Git server on Synology DiskStation"

...

"Substitute your admin user name anywhere it says "USERNAME,".." ..

"At this point, if all went well, we should be able to ssh into the server without a password prompt:

```
$ ssh USERNAME@SYNOLOGY_NAME.local"
```

pssst: you are still root, and all users still have to be admin to connect via SSH on a Synology NAS. Maybe the title of this should be "Setting up non-password Git server on Synology DiskStation"
